LiKang Front inserting coin acceptor

LK720C manual

Product Features

- 1. Suitable for a variety of metal coins.
- 2.CPU process control, accurate scoring.
- 3. Special precision/normal stall, coin smoother.
- 4. Optional output pulse width.
- 5. Prevent fishing and other means of cheating, cheat alarm.
- 6. Prevent diameter of the coin is 2mm less that the sample one.
- 7. The panel adopts patent design, anti-phishing and anti-cheating.

Steps for usage

- 1. Take out the plastic coin from the slot, put your coin.
- 2. Depending on your motherboard choice CÓIN signal output mode (normally closed / normally open). Usually use the NC stall.
- 3.Depending on your motherboard to select the output pulse switch (20ms / 40ms / 100ms). Usually 20ms stall.
- 4. Based on your currency, select the sensitivity. If you require the ability to identify strong. The sensitivity switch to "accurate " if the coin error, occurred during part of the coin mistaken for real currency counterfeiting. You will need to switch sensitivity "normal.

D

5.Coin is installed, connect the power lines and signal lines can be used, then put on your use of the reference currency.

Adjust the sensitivity slightly, the factory has adjusted to a reasonable position.

Step@:Set SW1

output mode, select
NC/NO, the factory
setting is NC.

Step@:Set SW2, select the output pulse switch(20 ms/40ms/100 ms),the factory setting is 20ms.

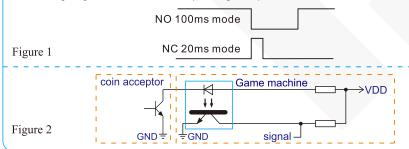

Step®:Set SW3, sensitivity switch, select precise/ normal, the factory setting is normal.

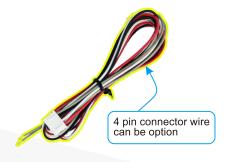

Communication circuit

Coin detected "real coin", when the circuit gives a pulse signal (the pulse signal can be selected by the switch SW1,normally closed or normally open output;SW2 switch to select pulse width,see Figure 1)

The circuit output of this product is a triode collector or MOS tube drain open output, When it is used, users are advised to use optocouplers to receive signals when designing the interface circuit (see Figure 2).

Coin slot: Please use the coins \$\phi 20mm^{\phi} 29mm,the thickness of the coins is 1.2mm^{2}.2mm.

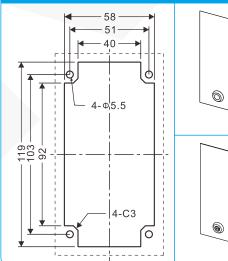

Coin bar;

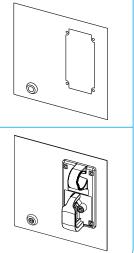

When a larger diameter coin or a foreign body stuck, flip the level to exit the foreign coin.

Common abnormalities handling

A.Coin not passed

- 1. If there is poor contact in the coin power outlet;
- 2.If the wiring is correct;
 3.If there is a foreign body in the coin track;
 4.If power supply 12V is normal;
 5.If the out mouth of coin is smooth;

- 6. If prototype is fit correctly;
- 7.If mounting depth is enough;
- 8. If there is a foreign body in the coin track, such as electric eye position is blocked.

B. Coin not score

- 1.If SW1 NO/NC is set matched;
- 2.If SW2 plus width is matched;
- 3.If the signal is connected well, if connection method is correct;
- 4. Coin signal and open collector output, if the target board is connected with pull-up resistor.

C. Coin not smooth

- 1.Adjust precise switch, precision stall:more stringent selection, commonly normal stall;
- 2.If prototype is fit correctly;
- 3.If coin slot is smooth, such as hopper tank depositing port and slot machine outlet slot are aligned;
- 4.Adjust VR knob, clockwise screening more relaxed, counterclockwise more strict.

D. Accept false coin

- 1.Adjust precise switch to precision stall;
 2.Counterclockwise adjust VR knob(counterclockwise more strict)

- E. Code mode doesn't move1.If the wiring is correct(An end of the code table is connected with code table line, the other end of DC+12V);
 - 2.If the code mode is bad;
 - 3. Cable resistance is too large, resulting in power is below standard;
- 4. The power supply voltage and rated voltage code table required

Basic parameters			
Operating voltage			DC12V±10%
Standby currency			< 50mA
Operating currency (Maximum current)			< 650mA
Operating temperature			-15℃~65℃
Output mode			OC.
Output signal			20ms/40ms/100ms
Coin diameter			20~29mm
Coin thickness			1.2~2.2mm
Angle assembly			-5°~0°
Individual packaging	Meas		187*72*152mm
	Gross weight	Without wire	587g
		With wire	596g
Carton packaging	Package		30PCS/SET
	Meas		580*380*325mm
	Gross weight	Without wire	18.5KG
		With wire	18.8KG

Assemble requirements

To prevent interference from adjacent signals, the adjacentmounting distance should be greater than 15mm.
